Amendments to the Claims

1. (currently amended) A process for inhibiting and/or delaying carbamylation of a poptide/protein polypeptide in a urea and/or cyanate containing solution, the process during processing of said peptide/protein comprising the a step of adding a carbamylation inhibiting carbamylation-inhibiting compound to the solution. process wherein said carbamylation-inhibiting compound is not an ethylene diamine like compound selected from the group consisting of glycinamide. histidine, 4-hydroxyl proline, Glycine-Glycine (Gly-Gly), and Glycine-Histidine (Gly<u>-His)</u>.

Fax:914-693-4236

- 2. (canceled).
- 3. (currently amended) The process of Glaim 1 A process for inhibiting and/or delaying carbamylation of a polypeptide in a urea and/or cyanate containing solution, the process comprising a step of adding a carbamylation-inhibiting compound to the solution, wherein the carbamylation-inhibiting compound is a dipeptide.
- 4. (canceled).
- (canceled).
- 6. (currently amended) The process of Claim 1, wherein the protein polypeptide is a ribonuclease.
- 7. (original) The process of Claim 7 wherein the ribonuclease is RNase A.
- 8. (currently amended) The process of Claim 1 wherein the carbamylationinhibiting compound is added to the solution in an amount effective to provide about 100% carbamylation percent protection is of the polypeptide about 100% after for a period of three weeks.
- 9. (currently amended) The process of Claim 1, wherein the concentration of the carbamylation-inhibiting compound is between 1 mM and 150 mM.

AKZO PATENT

- 10. (currently amended) The process of Claim 1, wherein the <u>carbamylation-inhibiting</u> compound is selected from the group consisting of histidine, 4-hydroxyl proline praline, and <u>GlycylGlycine</u> <u>Glycine-Glycine</u> (Gly-Gly).
- 11. (currently amended) The process of Claim 4 9, wherein the cyanate in the solution is at a concentration of about 5 mM.
- 12. (currently amended) The process of Claim 1, wherein the <u>carbamylation-inhibiting</u> compound has a buffering capacity of about neutral.
- 13. (new) The process of Claim 3, wherein the polypeptide is a ribonuclease.
- 14. (new) The process of Claim 13, wherein the ribonuclease is RNase A.
- 15. (new) The process of Claim 3, wherein the carbamylation-inhibiting compound is added to the solution in an amount effective to provide about 100% carbamylation protection of the polypeptide for a period of three weeks.
- 16. (new) The process of Claim 3, wherein the concentration of the carbamylation-inhibiting compound is between 1 mM and 150 mM.
- 17. (new) The process of Claim 16, wherein the cyanate in the solution is at a concentration of about 5 mM.
- 18. (new) The process of Claim 3, wherein the carbamylation-inhibiting compound has a buffering capacity of about neutral.
